

A North American manufacturer & global leader in custom lead products

# FORKLIFT COUNTERWEIGHTS

Mars Metal Company manufactures custom and production forklift counterweights to satisfy your specific requirements.

## CAPABILITIES:

- Complex lead counterweight castings
- Straight lead fills into your fabricated or cast housings
- Design and fabrication of steel canisters, molten lead fill to your desired weight specifications, weld any pour holes closed, surface-grind any projecting weld beads, primer paint and final coat
- Complete turn-key counterweights ready to install

## BENEFIT OF LEAD FILLED FORKLIFT COUNTERWEIGHTS:

Space Savings – Lead is approximately 45% more dense than steel.

- Make your existing counterweight smaller and narrower
- Increase the weight of your counterweight and not take up any more space than you are using now
- Smaller, lead filled counterweights provide better visibility to an operator when backing up and can provide a tighter turning radius by reducing rear end swing
